

## Milestone 3

### Introduction

This report helps in understanding the requirements required for the assigned project. Following section consists of a roadmap and the timelines required to complete the project. The support team of IIT madras often get overwhelmed with queries and emails, without proper software the work of the support becomes tedious and time consuming. The below components, user stories and road map help in analyzing the problem and guide us to the path of implementation.

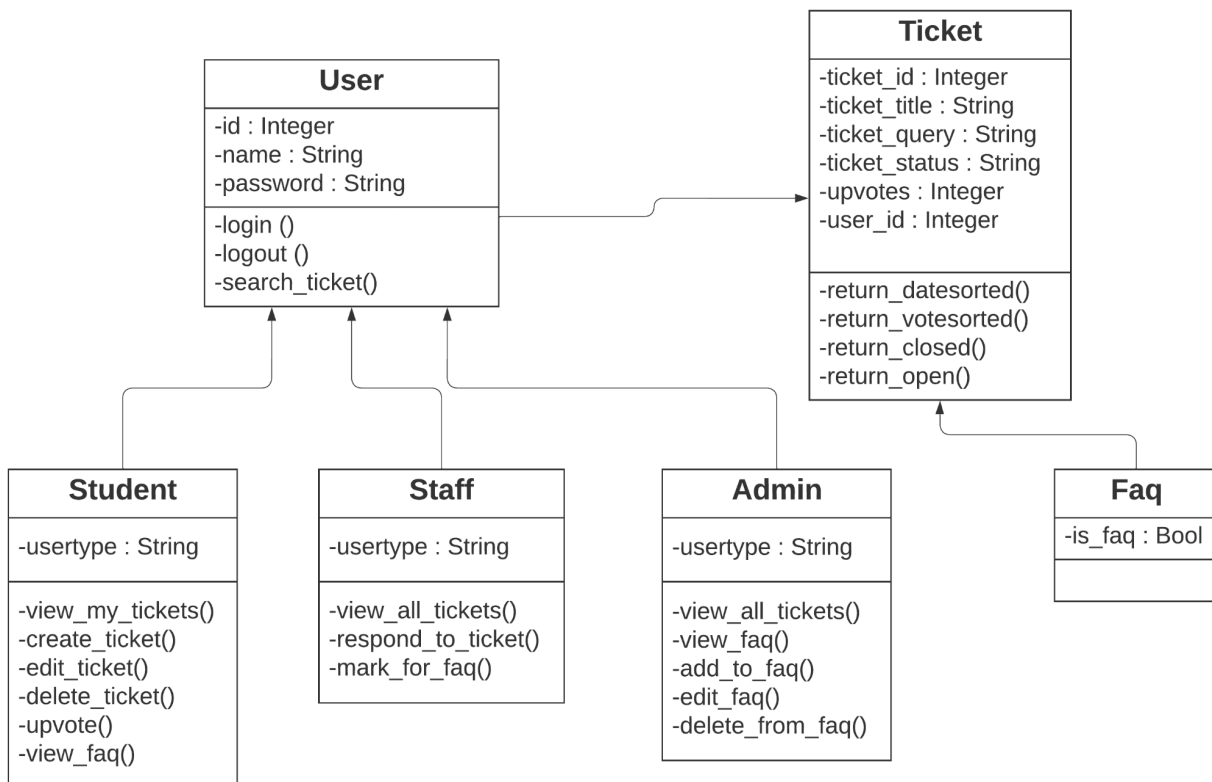

### Component Identification

Based on the software guidelines and principles ,critical components identified are::

1. Student component
2. Staff component
3. Ticket management component

Through the student component, a student is able to register/login to the system and can raise queries by creating tickets or can view the ticket created by fellow students. The created ticket is then resolved by the concerned faculty and updated. All the tickets are maintained using the ticket management system.Solved queries are then added to FAQ which reduces duplication of tickets.

### Class Diagram

### Project Scheduling

Jira is chosen as a tool for Project Scheduling. The gantt chart is prepared with time bound tasks which are discussed with fellow team members.

Weekly timeline

## Monthly timeline

## MOM(20/02/2023):

1. Discussing user stories
